

DRAIN TECH PTY LTD

Pipe and Cable Laying Services

Fact Sheet # 7

In addition to Land Drainage services, Drain Tech can offer innovative methods of pipe and cable installation. In many instances, adaptations to machinery can allow simultaneous excavation, sand bedding and installation of the utility in a single pass. This technology offers many advantages over traditional excavation processes :

- reduction in excavated material
- spoil is suitable for neat, efficient backfilling
- minimum disruption to easement
- single pass operation increases speed and safety
- services can be quickly laid in unstable soils
- location tapes and markers can be installed whilst backfilling

Our services can be used for installing the following:

- RRJ uPVC pipes to 300Ø
- Compression and welded joint PE
- Cable and optic fibre conduits
- Direct laid cables and slabbing

Contact Richard Gloyne to discuss how Drain Tech can give you the competitive edge on your next project.
